1.INRODUCTION

Project Overview

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.

The main aim of the project is to build a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).

Purpose

Nutrition Analyzer helps in the detailed and perfect determination of the component nutrients present in any food item. Food components have vast bio metabolic roles and could affect human health severely.

Purpose of the AI powered Nutrition Analyzer is to help individuals who needs a proper nutrition assistant to achieve fitness ,to cure diseases through foods or to lead a healthy lifestyle. With the help of Artificial Intelligence , it was possible to achieve a proper nutrition analyzer which is capable of showing the nutrition content of the food when we give the picture of it.

2.LITERATURE SURVEY

Existing Problem

Controlled intake of nutrition is recommended as a condition for being a healthy individual. Knowing and monitoring how much food is consumed during the day, following the calorie and nutrition of these foods helps to control healthy nutrition. However there is no proper assistance to achieve it. Nutritional intake is fundamental to human growth and health, and the intake of different types of nutrients and micro-nutrients can affect health. The content of the diet affects the occurrence of disease, with the incidence of many diseases increasing each year while the age group at which they occur is gradually decreasing. The consumption of a wide variety of food items is necessary in order for the human body to obtain the right amounts of nutrients. Failing to follow such a well-balanced diet, in combination with a generally unhealthy way of living, has been shown to increase the risk for cardiovascular disease, type II diabetes and some forms of cancer.

Problem Statement Definition

Ideal situation:

Ideally, a Nutrition Analyzer is available which will help people in assisting the nutrition analysis and help them in maintaining good health.

Reality:

Currently there is no ideal nutrition analyzer is available. Those which are available, fails to satisfy the needs of the people. Some are not personalized while some are very complicated to be accessed by everyone. Hence, there is no Nutrition analyzer to guide and assist people.

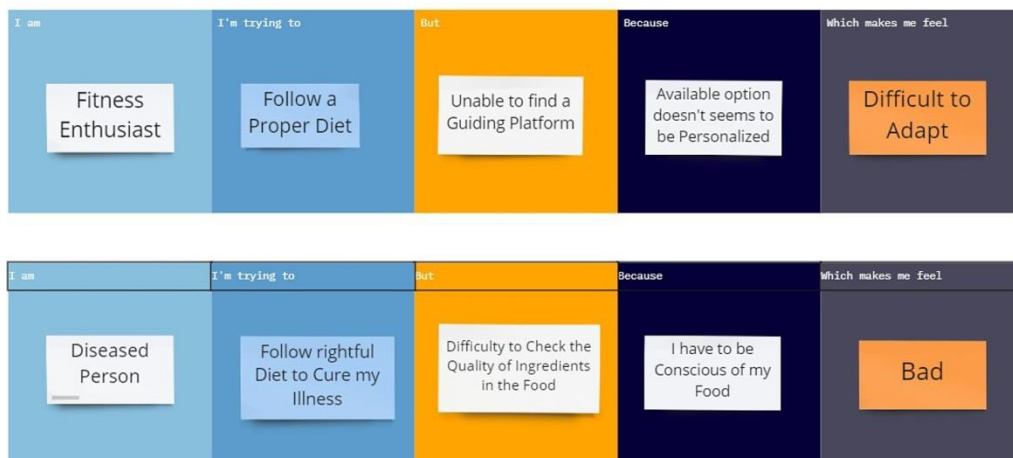

Consequences:

People tend to consume food without the knowledge of nutrition content of the food. This results in nutrition imbalance leading to nutrition deficiencies and diseases.

Proposal:

Our project of Nutrition Analyzer for Fitness Enthusiasts Focus on Developing a simple Nutrition Analyzer which is capable of analyze the nutrition in the food by giving the picture of the food. This is achieved by Artificial Intelligence with Python, Deep learning ,CNN etc..

PROBLEM STATEMENT

3.IDEATION AND PROPOSED SOLUTIONS

Empathy Map Canvas

Empathy mapping is a simple yet effective workshop that can be conducted with a variety of different users in mind, anywhere from stakeholders, individual use cases, or entire teams of people. It can be conducted by many different teams such as design teams, sales, product development or customer service. Essentially, it is an exercise that seeks to get inside the head of the customer as they interact with your product/service.

Nutrition Analyzer does the process of determining the nutritional content of the food that provides information about chemical composition, processing, quality control and contamination of food

The following empathy map helped us to understand the customer needs and their expectations and to develop our Nutrition Analyzer.

Proposed Solution

1. Problem Statement

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays it has become even more difficult for people to understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.

2. Solution Description

In order to guide people to follow healthier eating habits nutrition analyzer has to be introduced. Nutritional analyzer does the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.

3. Novelty/Uniqueness

Consult Online Doctor/ Nutritionist, Research on some websites based on the nutrition and Chat- bots in which we can able to answer all our queries based on importantly in Calories, Nutritional Food content, Diet plans, Balanced food based charts etc.. This also gives the correct solution and answer for the Nutrition to get fit in our life.

4. Social Impact/ Customer Satisfaction

Being Healthy is very important and our project will help those who are trying to maintain their health. There are different food available and there are many undesirable contents in the food. Many people consume them unconsciously. Our project paves way for conscious eating and to control what we eat. This will help many people who are trying to eat according to their body needs like people with health conditions or some people who likes to consume healthy content. This can create a great awareness among the people and help them in many ways.

5. Business Model

The person using nutrition analyzer may avoid spending time and money for nutrition analyst instead by paying the less premium amount can communicate with nutritional specialists and get benefited.

6. Scalability of Solution

AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food maintain a healthy diet. According to their tracking system for the person nutrients intake can increased or decreased.

Problem-Solution Fit

1. Customer Segments:

Consults on Nutrition

2. Jobs-to-be-done:

- Healthy diet plan
- Quality control of food
- Nutrition rich food recommendations
- Different nutrition pattern exploration
- Classification of food based on its nutrients

3. Triggers

To maintain good health and to regulate their eating. Good intake of

foods

4. Emotion Before/After

Before: Depressed, Exhausted, Confused, Tense on body shape

After : Confidence, Delightful, Encouraged, Motivated, Customer became mentally and physically fit

5. Available Solutions

- They can hire a personal nutritionist.
- They can consult dietitians
- They can use apps such as My Fitness Pal, Chronometer, Life Sum, etc...

6. Customer

Lack of knowledge on understanding everything and go beyond on calorie counting, scared on getting help from the resources on analyzer, whether the premium amount for the premium is acceptable for the customers.

7. Behavior

Consulting doctors or nutritionist, enquiries about the food to be consumed, refer articles such as magazine, newspaper, watching exercises and yoga, searching it in websites ,etc.....

8. Channels of Behavior

Referring Articles, Checking websites related on nutrition, Consulting nutritionist on online, etc....

9. Problem Root cause

- ☐ Fast paced lifestyle
- ☐ Availability of low quality food
- ☐ Nutrition less food
- ☐ Improper diet plan
- ☐ Lack of health related awareness
- ☐ Emotional Eating
- ☐ Improper food timings

10. Solution

Food has the power to influence metabolism and health directly. If food is the reason nutrition is the result, Hence we should give high importance to proper nutrition. Our project "AI Powered Nutrition Analyzer" helps people to get to know the nutrition content in their food and improve body health.

4. REQUIREMENT ANALYSIS

Functional Requirements

Following are the functional requirements for the proposed solution.

FR NO.	FUNCTIONAL REQUIREMENTS(EPIC)	SUB REQUIREMENT(STORY/SUBTASK)
FR-1	USER REGISTRATION	<ul style="list-style-type: none"><input type="checkbox"/> Registration through Gmail<input type="checkbox"/> Registration through Mobile Number<input type="checkbox"/> Registration through Face-book
FR-2	USER CONFIRMATION	<ul style="list-style-type: none"><input type="checkbox"/> Confirmation via Email<input type="checkbox"/> Confirmation via OTP

FR-3	USER DETAILS	PERSONAL DETAILS FOOD DETAILS	
		Age	Food
		Height	Recipe
		Weight	Added ingredients
		Diseases if any	Age
		Conditions is any	
		Allergies is any	
FR-4	USER REQUIREMENTS	<ul style="list-style-type: none"> □ The user simply inputs your recipe ingredients and amounts. The software will instantly produce an accurate readout of your dish in terms of nutritional analysis in a readable format that consumers are familiar with. □ With already given details the system can alert the consumer if any content of their allergies ,it can alert the consumer 	

Non-Functional Requirements

Following are the functional requirements for the proposed solution.

FR.NO	NON-FUNCTIONAL REQUIREMENTS	DESCRIPTION
NFR-1	USABILITY	<ul style="list-style-type: none"> ➤ No training is required to access the Nutrition Analyzer. ➤ The results should be loaded within 30 seconds.

		<ul style="list-style-type: none"> ➤ It should be user friendly and comfortable. ➤ It should be simple and easy to use. ➤ The results should be self explanatory so that it can be understood by common people.
NFR-2	SECURITY	<ul style="list-style-type: none"> ➤ AI powered nutrition analyzer for fitness should contain more security in which our data which entered or maintained should be more security. ➤ With the help of the username and password it provides more security in which it can access more securable and the data are private. ➤ It should be social-economic which should access to sufficient and safe to use.
NFR-3	RELIABILITY	<ul style="list-style-type: none"> ➤ It is Important that the AI powered nutrition analyzer for fitness provides should Must reliable. ➤ How a person can find it is reliable? It is easy to find that is he/she can compare the nutrition based food with other nutrition related application so, it can easily rectify whether it is reliable or not. ➤ But it take too much time, to avoid this a reliable application should made in which it itself produces whether we can get correct solution or not. So, it is necessary that the AI powered nutrition analyzer for fitness should have proper data and information in which we can get a correct information

		<p>about it and also get a proper guidance about it.</p> <ul style="list-style-type: none"> ➤ With the proper guideness and proper information in which we can get a nutrition properly and we can have get a proper fitness plan. ➤ It should also provides the information on nutrition and health which it should prevent from health information on diseases, health risks and prevention guidelines. It should also provides an extension a research based online learning network with several resource areas, so it provides more reliability in that area. For more reliable it can also contains the calorie information, balanced diet plans, what type food can consumed at what time etc. So, by this way it can reliable.
NFR-4	PERFORMANCE	<ul style="list-style-type: none"> ➤ It should provide more number of users to consume at any time and at any place. ➤ It should provide Reliability, Scalability, Security and Usability. ➤ It should contain minimum data while over-paging the websites or application and it is necessary that it should not exceed more than 20mb. ➤ While consuming the page it should provide the response as much as possible without any delay or time traffic. ➤ The connection should e properly maintained so that it can use while travelling or in remote places. ➤ The nutritious food to meet their dietary needs and the food

		<p>preferences for an active and healthy life.</p> <ul style="list-style-type: none"> ➤ It should be consistently access, availability and affordability of foods and beverages that promote well-being and prevent from diseases. ➤ It should suitable in all situations that exists to all people, at all times.
NFR-5	AVAILABILITY	<ul style="list-style-type: none"> ➤ Easy to access Data. ➤ Avoids Data redundancy and inconsistency. ➤ Fast and Efficient. ➤ User Friendly.
NFR-6	SCALABILITY	<ul style="list-style-type: none"> ➤ The architecture for AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food and helps the user to maintain a healthy diet. ➤ According to their tracking system implemented in architecture provide the proper mechanism to the every individual of their nutrients intake which can be increased or decreased.The premium amount for analyzer is very much optimum.

5. PROJECT DESIGN

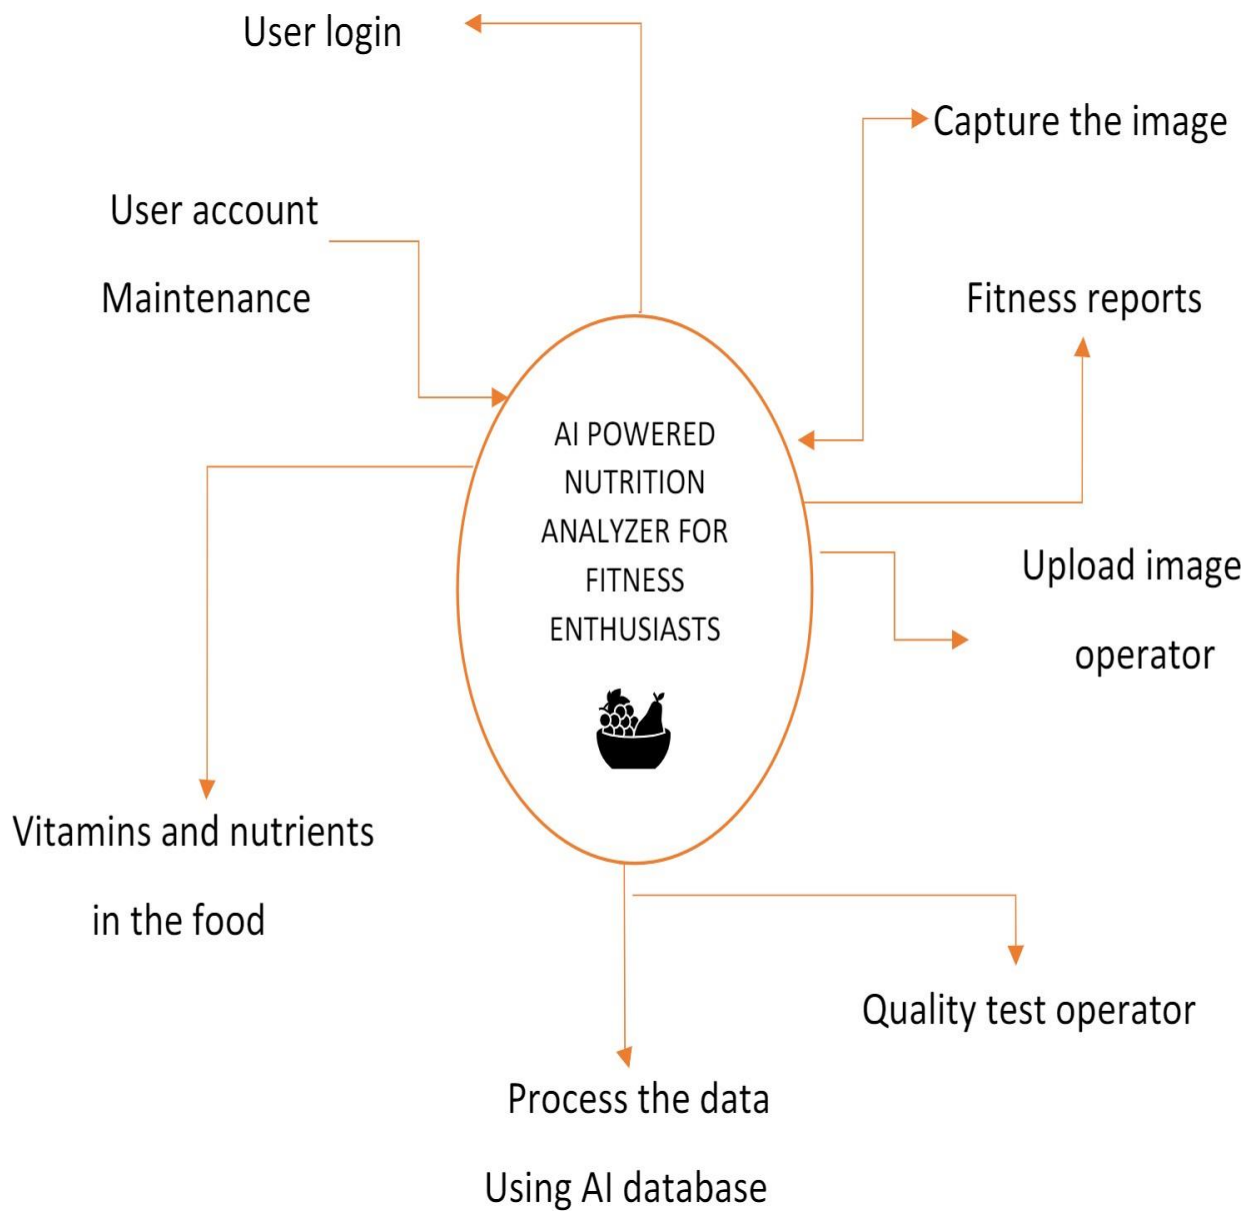

Data flow diagrams

Simplified Data flow:

1. The application starts from the user login. the user must enter their mail id and the password to use the nutrition analyzer
2. The next step is user should capture the food and upload the food in the specified capture image icon.
3. The third step is click the "Analyze Food" and wait for sometime. The AI database process the image.
4. The tool figuring out image and page automatically give the information about food such that the quality off the food, Nutrition , then issue the diet and fitness plan for the user.

DATA FLOW DIAGRAM LEVEL 0

Technical and Solution Architecture

Technical Architecture:

ABSTRACT:

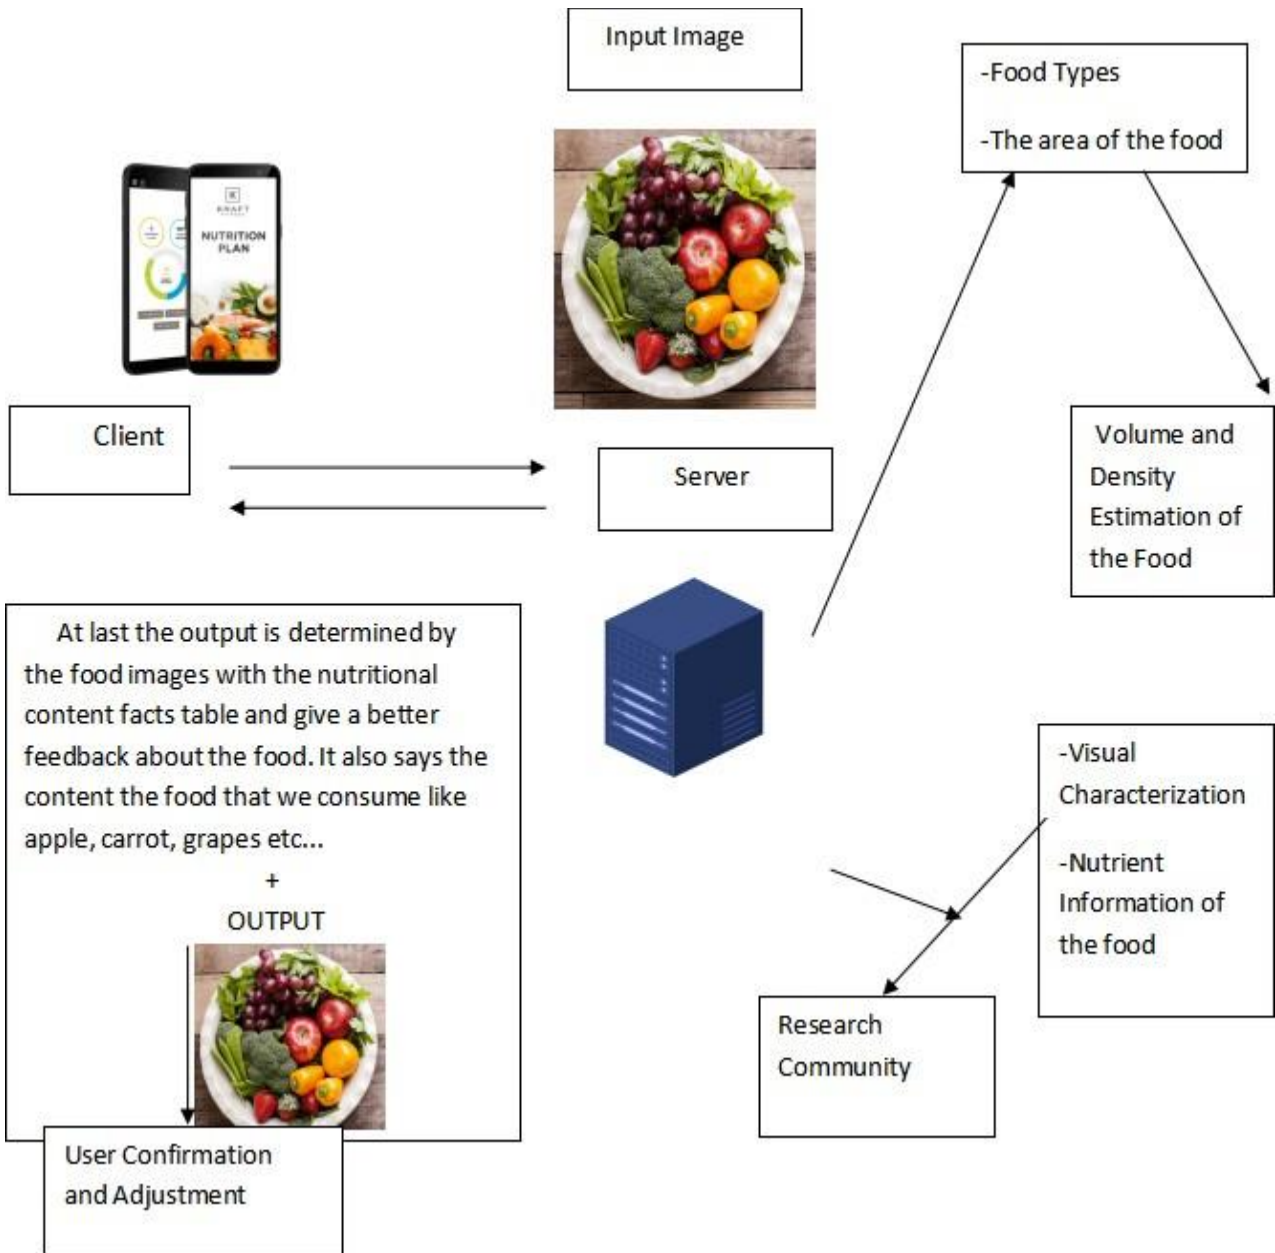

- The main aim of the project is to building a model which is used for classifying the fruit, vegetables, spinach, fish, meat, Green leafy vegetables etc..... depends on the different characteristics like colour, shape, texture etc.
- Here the user can capture the images of different fruits, vegetables, spinach, Green leafy vegetables, fish, meat , etc.. and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).
- Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.
- Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.
- This solution helps fitness enthusiasts to do Nutritional analysis of food which provides information about the chemical composition, processing, and quality control of food.
- The chance of occurrence of error is minimal since the model provides more precise reports of the analysis.

OBJECTIVES:

- Being healthy should be an integral component of your life. A Healthy intake of food can assist in the prevention of chronic diseases and long-term ailments.
- What you eat is closely related to your health. Eating a healthy diet can help boost your immune systems, help you maintain a healthy weight and can improve your overall health.
- The importance of diet can't be overstated for a healthy lifestyle. People get the vitamins, minerals and nutrients they need to function and thrive from the foods they eat, so choosing foods that offer the most of those components helps improve quality of life.
- It's just as important to limit foods that are high in fat, sugar, sodium and cholesterol as it is to choose healthy foods.

- Nutrition helps in functioning, maintaining, or improving important bio metabolisms like building muscles, producing energy, thriving body cells, improving body health, replenish malnourishment, and strengthening immunity. If food is the reason, Nutrition is the result.
- Consumers have become more concerned over the quality and compositions of their food purchases, the contained ingredients, and the presence of additives and contaminants. Therefore, knowledge of the chemical and biochemical composition of foods is important to the health, well-being, and safety of the consumers.
- We consume food so that we can obtain proper nutrition. Hence it is very important for us to know the composition of nutrients in our food.
- Through a nutrition analyzer we can measure the nutrients and with that information we can make a healthy diet by adding nutrients required for our body and excluding which is not good for health.

TECHNOLOGY ARCHITECTURE

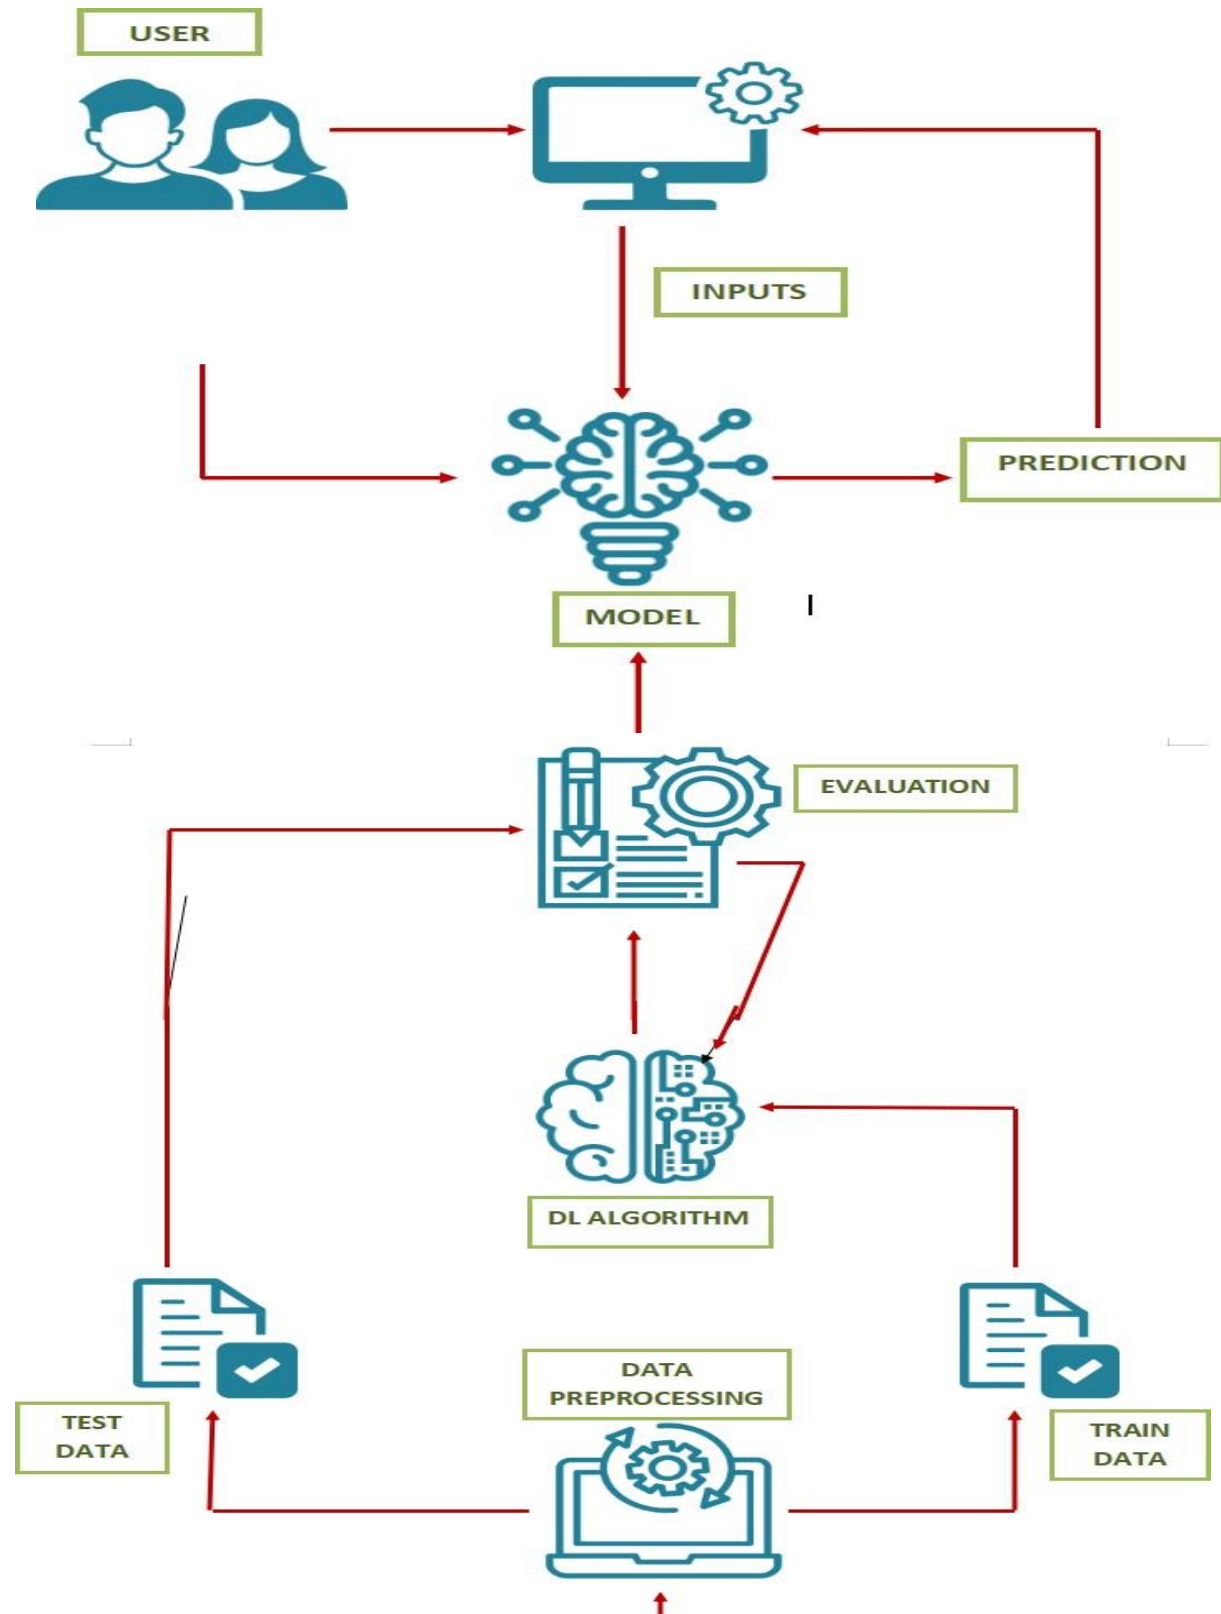

Solution Architecture:

Being healthy should be an integral component of your life. A Healthy intake of food can assist in the prevention of chronic diseases and long-term ailments. What you eat is closely related to your health. Eating a healthy diet can help boost your immune systems, help you maintain a healthy weight and can improve your overall health. The importance of diet can't be overstated for a healthy lifestyle. People get the vitamins,

minerals and nutrients they need to function and thrive from the foods they eat, so choosing foods that offer the most of those components helps improve quality of life. It's just as important to limit foods that are high in fat, sugar, sodium and cholesterol as it is to choose healthy foods. Nutrition helps in functioning, maintaining, or improving important bio metabolisms like building muscles, producing energy, thriving body cells, improving body health, replenish malnourishment, and strengthening immunity. If food is the reason, Nutrition is the result. Consumers have become more concerned over the quality and compositions of their food purchases, the contained ingredients, and the presence of additives and contaminants. Therefore, knowledge of the chemical and Biochemical composition of foods is important to the health, well-being, and safety of the consumers. We consume food so that we can obtain proper nutrition. Hence it is very important for us to know the composition of nutrients in our food. Through a nutrition analyzer we can measure the nutrients and with that information we can make a healthy diet by adding nutrients required for our body and excluding which is not good for health.

- This solution helps fitness enthusiasts to do Nutritional analysis of food which provides information about the chemical composition, processing, and quality control of food.
- The chance of occurrence of error is minimal since the model provides more precise reports of the analysis.
- First, the user captures the images of the food and uploads it.
- Next, the image will be sent to the trained model.
- The model will classify the food based on the different characteristics like colour

RELIABILITY:

- It is Important that the AI powered nutrition analyzer for fitness provides should Must reliable.
- How a person can find it is reliable? It is easy to find that is he/she can compare the nutrition based food with other nutrition related application so, it can easily rectify whether it is reliable or not.
- But it take too much time, to avoid this a reliable application should made in which it itself produces whether we can get correct solution or not. So, it is necessary that the AI powered nutrition analyzer for fitness should have proper data and information in which we can get a correct information about it and also get a proper guidance about it.
- With the proper guidance and proper information in which we can get a nutrition properly and we can have get a proper fitness plan.
- It should also provides the information on nutrition and health which it should prevents from health information on diseases, health risks and prevention guidelines. It should also provides an extension a research based online learning network with several resource areas, so it provides more reliability in that area. For more reliable it can also contains the calorie information, balanced diet plans, what type food can consumed at what time etc. So, by this way it can reliable.

SCALABILITY:

- The architecture for AI powered Nutrition Analyzer for fitness provides the clear procedure daily consumption of food and helps the user to maintain a healthy diet.
- According to their tracking system implemented in architecture provide the proper mechanism to the every individual of their nutrients intake which can be increased or decreased.
- The premium amount for analyzer is very much optimum.

PERFORMANCE:

- It should provide more number of users to consume at any time and at any place.
- It should provide Reliability, Scalability, Security and Usability.
- It should contain minimum data while over-paging the websites or application and it is necessary that it should not exceed more than 20mb.
- While consuming the page it should provide the response as much as possible without any delay or time traffic.
- The connection should e properly maintained so that it can use while travelling or in remote places.

- ❑ The nutritious food to meet their dietary needs and the food preferences for an active and healthy life.
- ❑ It should be consistently access, availability and affordability of foods and beverages that promote well-being and prevent from diseases.
- ❑ It should be suitable in all situations that exists to all people, at all times.

SECURITY:

- ❑ AI powered nutrition analyzer for fitness should contain more security in which our data which entered or maintained should be more security.
- ❑ With the help of the username and password it provides more security in which it can access more securable, and the data are private.
- ❑ It should be social-economic which should access to sufficient and safe to use.

USABILITY:

- ❑ No training is required to access the Nutrition Analyzer.
- ❑ The results should be loaded within 30 seconds.
- ❑ It should be user friendly and comfortable.
- ❑ It should be simple and easy to use.
- ❑ The results should be self-explanatory so that it can be understood by common people.

User Stories

Functional Requirement (Epic)	User Story Number	User Story / Task
Data Collection & Image Processing		
	USN-1	As a user, First I must register for IBMcloud

	USN-2	As a user, I must collect and download the datasets
	USN-3	After collecting the datasets, Image Preprocessing must be done.
	USN-4	After image preprocessing, user has to build the model
Model Building & Testing		
	USN-5	As a user, I have to develop a code for this model building and I have to build a model
	USN-6	After model building, I have to create an application for the end users
	USN-7	As a user, I have to Create a folder which contains all the necessary html, css, js and python coding files
Application building		
	USN-8	Create HTML pages to design the front-end part of the web page
	USN-9	Create the flask application and loading the model file
	USN-10	Link the flask file with html files
Cloud integration		
	USN-11	Train the model on Cloud

6. PROJECT PLANNING & SCHEDULING

Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members

Sprint-1	Registration

10. ADVANTAGES AND DISADVANTAGES

Advantages:

- Food and food habits are ever-changing and evolving. People and professionals need to quickly adapt to new food products, diets, and changing preferences. The best way to instantly adapt to these changes is to have software that changes and adapts with you.
- Using automated nutrition analysis software will allow you to free up more time to innovate or grow your business. If you find a nutrition analysis software that has all the features you need, you can create much more time to focus on improving your business.

- Features such as a quick preview of nutrients while adding foods to diets, menus, and recipes give you the ability to save time when new recipes and food products are introduced.
- Having quick and easy software to help them plan their meals will save you tons of time.

Disadvantages:

- This methodology is still limited by its dependency on time-consuming and error-prone manual video annotations, with many studies resorting to the use of multiple human annotators.
- Often suffers from reliability issues.
- It is extremely expensive due to semantics analysis model and nutritional analysis model.
- In order to make recommendations, the system needs to collect nutritional needs from users. Most of the information is only provided through continuous interactions with users. However, in reality, recording nutritional intake from users cannot avoid faults because users usually forget or give wrong information about the food they have consumed.
- Moreover deep learning requires expensive GUIs and hundreds of machines. This increases the cost to the users.

11. CONCLUSION

Food is essential for human life and has been the concern of many health care conventions. In this project we have built a nutrition analysis model that classifies the nutritional content of the food through the image uploaded by the user. Such Nutritional analysis helps people understand their daily eating habits, exploring nutrition patterns and maintaining a healthy diet. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.

The nutritional analysis model is implemented using Convolutional neural network and the web application is built and implemented using Flask framework. As for the future work, the model can be trained and tested on more datasets to provide accurate results and better performance.

12. FUTURE SCOPE

The future scope of this project is very broad. Few of them are:

- The model could be trained using vast database in order to increase the accuracy of results.
- The Backend framework of the web application can be improved so that the uploaded images can be handled appropriately.
- In addition to the nutrition analysis, the application can also be designed to provide recipes that can be prepared using the nutrient-rich foods
- A database can also be implemented for the system so that users can save their data and relook into it later.
- The Web application can be further developed and launched as an Android App so that anyone anywhere with or without internet connection can access it and get benefited from its use cases.

13. APPENDIX

Source Code:
